

# Advance Purchase Requisition

Microsoft Dynamics 365  
Business Central

## Complete solution for procurement performance Microsoft Dynamics 365 Business Central

Module Requisition is an additional module in Microsoft dynamics 365 business central. This module has an important function in the business process of every company, where requests for purchases from users of each department addressed to the purchasing department can be noted in this module. So companies can find out the demand requirements needed by users in carrying out operational transactions.

### Benefit :

Provide information to the procurement department about the need for goods or services needed by a department in the company

Control purchases from various divisions according to company requirements while monitoring through several parties for the approval process

Knowing the condition of the goods owned and the goods that will be assets of the company

The procurement process can run faster in ordering goods according to demand through the intended vendor
